PTM: TYROSINE PHOSPHORYLATED IN RESPONSE TO IL-6, IL-11, CNTF, LIF, CSF-1, EGF, PDGF, IFN-ALPHA AND OSM. SERINE PHOSPHORYLATION IS IMPORTANT FOR THE FORMATION OF STABLE DNA-BINDING STAT3 HOMODIMERS AND MAXIMAL TRANSCRIPTIONAL ACTIVITY (BY SIMILARITY). SIMILARITY: BELONGS TO THE STAT FAMILY OF TRANSCRIPTION FACTORS. SIMILARITY: CONTAINS 1 SH2 DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FUNCTION: TRANSCRIPTION FACTOR THAT BINDS TO THE INTERLEUKIN-6 (IL-6)-RESPONSIVE ELEMENTS IDENTIFIED IN THE PROMOTERS OF VARROUS ACUTE-PHASE PROTEIN GENES. STAT18 INTERACTS WITH THE N-TERMINAL PART OF C-JUN TO ACTIVATE SUCH PROMOTERS IN A COOPERATIVE WAY.

PATHWAY: INVOLVED IN THE GP130-MEDIATED SIGNALING PATHWAY.

SUBUNIT: FORMS A HOMODIMER OR A HETERODIMER WITH A RELATED FAMILY MEMBER (AT LEAST STAT1) (BY SIMILARITY).

SUBCELLULAR LOCATION: NUCLEAR; TRANSLOCATED INTO THE NUCLEUS IN RESPONSE TO PHOSPHORYLATION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ARE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: STAT3A IS SEEN IN THE LIVER, SPLEEN, A
KIDNEY. STAT3B IS ALSO DETECTED IN THE LIVER, ALTHOUGH IN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PATHWAY: INVOLVED IN THE GP130-MEDIATED SIGNALING PATHWAY.
SUBUNIT: FORMS A HOMODIMER OR A HETERODIMER WITH A RELATED FAMILY
MYMBER (AT LEAST STATI) (BY SIMILARITY).
SUBCELLULAR LOCATION: NUCLEAR; TRANSLOCATED INTO THE NUCLEUS IN
RESPONSE TO PHOSPHORYLATION (BY SIMILARITY).
PTM: TYROSINE PHOSPHORYLATED IN RESPONSE TO IL-6, IL-11, CNTF,
LIF, CSF-1, EGF, PDGF, IFN-ALPHA AND OSM. SERINE PHOSPHORYLATION
IS IMPORTANT FOR THE FORMATION OF TRANEL DNA-BINDING STAT3
HOMODIMERS AND MAXIMAL TRANSCRIPTIONAL ACTIVITY (BY SIMILARITY).
SIMILARITY: BELONGS TO THE STAT FAMILY OF TRANSCRIPTION FACTORS.
SIMILARITY: CONTAINS 1 SH2 DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ACUTE-PHASE PROTEIN GENES

   -!- FUNCTION: TRANSCRIPTION FACTOR THAT BINDS TO THE INTERLE (IL-6)-KESPONSIVE ELEMENTS IDENTIFIED IN THE PROMOTERS (ACUTE-PHASE PROFEIN GENES).
-!- PATHAY: INVOLVED IN THE GP130-MEDIATE) SIGNALING PATHAY.
-!- SUBUNIT: FORMS A HOMODIMER OR A HETERODIMER WITH A RELAMEMBER (AT LEAST STAT1).
-!- SUBCELLILAR LOCATION: NUCLEAR; TRANSLOCATED INTO THE NUCRESPONSE TO PHOSPHORYLATION.
-!- TISSUE SPECIFICITY: HEART, BRAIN, PLACENTA, LUNG, LIVER, MUSCLE, KIDNEY, AND PANCREAS.
-!- PTM: TYROSINE PHOSPHORYLATED IN RESPONSE TO IL-6, IL-1], LIF, CSF-1, EGF, PDGF, IFN-ALPHA AND OSM. SERINE PHOSPHG IS IMPORTANT FOR THE FORMATION OF STABLE DNA-BINDING STAHMONOLIMERS AND MAXIMAL TRANSCRIPTIONAL ACTIVITY:
-!- SIMILARITY: BELONGS TO THE STAT FAMILY OF TRANSCRIPTION
                                                                                                                                                                                                                               PHOSPHORY ON SERINE.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         109
FUNCTION: TRANSCRIPTION FACTOR THAT BINDS TO THE IFN-STIMULATED RESPONSE ELEMENT (ISRE) AND TO THE GAS ELEMENT. THIS MULTIPROTE. TRANSCRIPTION FACTOR IS TERMED ISGF3.

TRANSCRIPTION FACTOR IS TERMED ISGF3.

PATHWAY: IFN-SIGNALLING PATHWAY:
SUBUNIT: IN RESPONSE TO IFN ALPHA/BETA, THREE SUBUNITS (STATI-SUBUNIT: IN RESPONSE TO IFN ALPHA/BETA, THREE SUBUNITS (STATI-ALPHA, STATI-BETA, STATI) OF ISGF3, BECOME PHOSPHORYLATED ON TYROSINE, MIGRATE INTO THE NUCLEUS, AND ASSEMBLE INTO A COMPLEX TOGETHER WITH ISGF3 GAMMA (P48), A DNA-BINDING PROTEIN THAT SPECIFICALLY BINDS TO THE IFN-STIMULATED RESPONSE ELEMENT. IN RESPONSE TO IFN GAMMA, STATI FORMS HOMODIMERS, THAT ALSO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  R., Qureshi S., Zhong Z., Wen Z., Darre genomic structure of the STAT genes: nciden: sites in Statl and Statz."; leic A ids Res. 23:459-463(1995).

RT "Stat3 and Stat4: members of the family of signal transducers and RT activators of transcription.";

RI Proc. Natl. Acad. Sci. U.S.A. 91:4806-4810(1994).

CC -1- FUNCTION: TRANSCRIPTION FACTOR THAT BINDS TO THE IFN-STIMULATED RESPONSE ELEMENT (ISRE) AND TO THE GAS ELEMENT. THIS MULTIPROTEIN C.

C. TRANSCRIPTION FACTOR IS TERMED ISGF3.

C. -1- SUBUNIT: IN RESPONSE TO IFN ALPHA/BETA, THREE SUBUNITS (STAT1-ALPHA, STAT1-BETA, STAT2) OF ISGF3.

C. TRANSCRIPTION FACTOR THE NUCLEUS, AND ASSEMBLE INTO A COMPLEX TYROSINE, MIGRATE INTO THE NUCLEUS, AND ASSEMBLE INTO A COMPLEX TYROSINE WITH ISGF3 GAMMA (P48), A DNA-BINDING PROTEIN THAT SPECIFICALLY BINDS TO THE IFN-STIMULATED RESPONSE ELEMENT. IN RESPONSE TO IFN GAMMA, STAT1 FORMS HOMODIMERS, THAT ALSO TRANSLOCATE INTO THE NUCLEUS TO ACTIVATE IFN GAMMA-RESPONSIVE.

GENES. INTERACTS WITH NMI (BY SIMILARITY).

-1- SUBCELLULAR LOCATION: NUCLEAR; TRANSLOCATED INTO THE NUCLEUS IN RESPONSE TO PHOSPHORYLATION.

-1- INDUCTION: BY IFN AND EGF.

-1- PTM: TYROSINE PHOSDHORY.----

THIS MULTIPROTEIN C TRANSCRIPTION FACTOR IS TERMED ISGF3.

C -I- SUBUNIT: IN RESPONSE TO IFN ALDHA/BETA, THREE SUBUNITS (STAT1-ALDHA, STAT1-BETA, STAT2) OF ISGF3, HECOME PHOSPHORYLATED ON TYROSINE, MIGRATE INTO THE NUCLEUS, AND ASSEMBLE INTO A COMPLEX TOGETHER MITH ISGF3 GAMMA (P48), A DAN-BINDING PROTEIN THAT SPECIFICALLY BINDS TO THE IFN-STIMULATED RESPONSE ELEMENT.

C -I- SUBCELLULAR LOCATION: NUCLEAR; TRANSLOCATED INTO THE NUCLEUS IN RESPONSE TO PHOSPHORYLATION.

C -I- ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING.

C -I- SIMILARITY: BELONGS TO THE STAT FAMILY OF TRANSCRIPTION FACTORS.

C -I- SIMILARITY: CONTAINS 1 SH2 DOMAIN.
